Important Facts

Creation story in the Genesis 1:1 – 2:3

The Book of Genesis opens the story of creation. God, a spirit hovering over an empty, watery void, creates the world by speaking into the darkness and calling into being light, sky, land, vegetation, and living creatures over the course of six days. This text is sacred to three religions, Judaism, Christianity and Islam.

Creation and science: Some people disagree about the purpose and meaning of Genesis. Some say it is an literal account (the Universe was created in six days), others that it is more a description of what God and creation are like rather than how creation actually happened.

The **Big Bang** is the name that scientists use for the most common theory of the universe. From the very early stages to the present day, The **Big Bang theory** is that the universe has not always existed, the early universe was hot and dense. As time passed the universe expanded and cooled. This idea first appeared in scientific form in 1931, by **Georges Lemaître**.

Some people say science and belief in creation are in conflict or complementary.

However, **Jennifer Wiseman** is a person of faith. She claimed that science does not require belief in God, but it does vastly enrich the sense of a purposeful creation.

Many people have debated that 'Genesis explores why the Universe and life exists. Science explores how the Universe works the way it does.'
